Benjamin Redd

bentheredd13@gmail.com | github.com/ben-redd

Skills

Languages & Frameworks: Playwright, TypeScript, JavaScript, Node.js, React.js, HTML5/CSS3, YAML
Testing & Automation: Visual Regression Testing, E2E Testing, API Testing, Flakiness Reduction, Test Suite Architecture, Page Object Model (POM)
Infrastructure & Tools: CI/CD (GitHub Actions / RWX), Firebase, Google Cloud Storage (GCS), Git, REST APIs, Jira, Claude Code

Experience

QA Engineer/Automation Engineer, Coalesce – Remote January 2024 – Present

- Architected an in-house Playwright visual-regression suite using GCS baselines, completely replacing two 3rd-party vendors and eliminating recurring SaaS costs
- Built out an AI-agent-driven dogfood environment lifecycle—authoring custom prompt harnesses and tool runbooks for Claude Code to enable autonomous provisioning and teardown of a Coalesce org with multiple users, workspaces, environments, and scheduled jobs.
- Owned Playwright end-to-end testing within a multi-warehouse TypeScript monorepo, leveraging the Page Object Model (POM) design pattern to streamline test writing and maintenance
- Significantly increased CI/CD pipeline reliability by resolving root-cause flakiness in our end-to-end tests (migrating Firebase emulators, isolating serial-spec retries, and securing branch protection)
- Partnered closely with software engineers to conduct risk-based manual testing for complex feature releases, authoring comprehensive bug reports and reproduction steps in Jira to minimize triage cycles.

QA Engineer, Maxwell – Remote Nov 2021 – Jan 2024

- Spearheaded the in-house automation initiative by researching, selecting, and implementing an automated test suite using Playwright.
- Maintained and systematically updated existing test suites to prevent regression and enhance ongoing code coverage
- Partnered closely with cross-functional software developers to manually test features in progress during active development sprints.
- Executed cross-browser, responsive UI, and mobile application testing across multiple staging environments to ensure consistent layout and functionality prior to releases.

Soldering Technician, Sinc Squared – Portland, OR 2015 – 2023

- Prepared, soldered, and rigorously tested diverse high-frequency breakout boards to uphold strict functional specifications.
- Coordinated manufacturing schedules and quality checks to ensure orders were packaged and shipped on time to fulfill customer requirements.

Education

Brigham Young University – Bachelor of Science in Exercise Science Dec 2018
3.94 GPA, 3x Dean's list award winner
Portland Community College – Associate of Science in General Studies June 2012
4.0 GPA
